PANOS, JEFFREY C

ART UNIT PAPER NUMBER

3713

DATE MAILED: 06/01/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/621,152	Applicant(s) THOMAS, ALFRED	
	Examiner Jeffrey C. Panos	Art Unit 3713	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 6/17/2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-31 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 5-8, 20, 30, and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Bennett (US Patent No. 6,056,642).

Graham teaches a video slot machine that contains multiple trigger events with bonus features. It is further taught that there is a video display unit 14 that simulates the rotation of a number of spinning reels 18 (col. 2: 41-44) in a base game that receives a wager and utilizes the mechanical device, such as a video slot reel (Fig. 2: ref. 24.1, 24.2; col. 2: 39-48) [claims 1, 2, 7, 20, 30]. The game machine detects an indication, or triggering condition, to play a special feature game that utilizes the mechanical device (col. 1: 29-49) [claims 1, 20, 30], where the triggering condition gives free games to the player and upon a second triggering condition there are more free games and a bonus feature awarded. This is inherent to be a bonus game where there are extra awards available [claim 3]. Graham lacks in specifically disclosing a response to the triggering condition that changes the appearance of the mechanical device and mechanical spinning reels. However, Bennett teaches a winning condition such as

taught by Graham as a triggering condition detected from a predefined result on mechanical spinning reels [claim 8, 31], where the winning condition is also a predefined set, such as three 7s (See Bennett, col. 2: 42-44) [claims 1, 2, 30]. Further, the change in appearance based on the winning condition or triggering event comprises an illumination by backlighting from an illumination source of the gaming machine [claims 1, 5, 20, 30], wherein the illumination source is comprised of LEDs for display (col. 2: 47-52) [claim 6]. The 7s change color by the illumination source when the winning condition is met and therefore the appearance of the mechanical device is changed [claims 1, 30] and alerts the player that the winning condition has been met, which creates visual stimulation and excitement for the player; thus it would have been obvious to one of ordinary skill in the art to change the appearance of the mechanical device upon a winning condition detected. It is also inherent that the displayed mechanical device is operable during both the base game and special feature game. Additional inherency lies in the gaming machine containing a controller that is operatively coupled to the value input device, displayed mechanical device and the illumination source (See Graham, col. 2: 54 – col. 3: 4).

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Cannon (US 2002/0025845 A1).

Regarding claim 4, Graham also lacks in disclosing that the special feature game comprises a secondary game with an additional wager. Cannon teaches a dual

wagering game where the player wagers on both a base game and a bonus game. The bonus game determines a multiplier that applies to the results of the base game winnings. It would have been obvious to one of ordinary skill in the art to use a secondary game such as the bonus game taught by Cannon (Abstract) in order to receive more money from the player, but also benefit the player with a possibility of increasing winnings through the multiplier value [claim 4]. Cannon teaches that the multiplier is used with the base game and is therefore directly applicable to being used with the base game of Graham because they are both slot machines.

Claims 9 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Bennett (US Patent No. 6,056,642) in further view of Perrie et al. (US Patent No. 6,481,713 B2), hereinafter Perrie.

Graham teaches a video slot machine with a trigger condition while Bennett teaches a slot machine that changes appearance upon winning condition, which is inherently a triggering condition for bonus games in many slot machines. Perrie teaches where the mechanical device is comprised of mechanical dice (col. 7: 14-26). It would have been obvious to one of ordinary skill in the art to contain mechanical dice in the game system in order to diversify a game such as poker. By creating a newer game, the game machine becomes interesting to new patrons because of a different version of the most common game in gambling. Moreover, having dice set up as they are in Figure 5 of Perrie shows that it performs equally well as a slot device because the

each die spins in the same place that a reel would be. Both have symbols located on them and generate outcomes.

Claims 10 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Bennett (US Patent No. 6,056,642) in further view of Perrie et al. (US Patent No. 6,481,713 B2), hereinafter Perrie.

Graham teaches a video slot machine with a trigger condition while Bennett teaches a slot machine that changes appearance upon winning condition, which is inherently a triggering condition for bonus games in many slot machines. It would have been obvious to one of ordinary skill in the art for the mechanical device to be a wheel because a wheel would perform equally well with respect to a reel. Both generate outcomes from the indicia located on them. One would be able to put symbols for the game on a wheel and the reel and create random outcomes. Both are capable of containing triggering events to move to bonus games. Therefore, it would be a mere design choice to have a wheel or a reel because the outcome of the game would end up being the same and the choice of one over the other does not solve any stated problem.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Gauselmann (US 2004/0092299 A1).

Graham teaches a video slot machine that contains multiple trigger events with bonus features. However, Graham lacks in specifically disclosing that there is an indication of a bonus feature as chosen by the player. Gauselmann teaches players choosing special symbols during a base game that may be used as a variety of things, such as a bonus game trigger symbol (§ 0004) [claims 11, 12]. It would have been obvious to one of ordinary skill in the art to allow a player to customize the bonus trigger event to increase user interaction, in turn increasing user excitement to generate more revenue by the gaming machine.

Claims 13-17, and 21-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Bennett (US Patent No. 6,056,642) in further view of Webb (US Patent No. 6,843,722).

Graham teaches a video slot machine that contains multiple trigger events with bonus features. It is further taught that there is a video display unit 14 that simulates the rotation of a number of spinning reels 18 (col. 2: 41-44) in a base game that receives a wager and utilizes the mechanical device, such as a video slot reel (col. 2: 39-48) [claims 17, 13, 26]. The game machine detects an indication, or triggering condition, to play a special feature game that utilizes the mechanical device (col. 1: 29-49) [claim 13], where the triggering condition gives free games to the player and upon a second triggering condition there are more free games and a bonus feature awarded. This is inherent to be a bonus game where there are extra awards available. Graham

Art Unit: 3713

lacks in specifically disclosing a response to the triggering condition that changes the appearance of the mechanical device and mechanical spinning reels. However, Bennett teaches a winning condition such as taught by Graham as a triggering condition detected from a predefined result on mechanical spinning reels [claim 27], where the winning condition is also a predefined set, such as three 7s (See Bennett, col. 2: 42-44) [claims 13, 26]. Further, the change in appearance based on the winning condition or triggering event comprises an illumination by backlighting from an illumination source of the gaming machine [claims 14, 13, 23], wherein the illumination source is comprised of LEDs for display (col. 2: 47-52) [claims 15, 22]. The 7s change color by the illumination source when the winning condition is met [claim 23] and therefore the appearance of the mechanical device is changed and alerts the player that the winning condition has been met, which creates visual stimulation and excitement for the player; thus it would have been obvious to one of ordinary skill in the art to change the appearance of the mechanical device upon a winning condition detected. Graham lacks in specifically disclosing that after the triggering event indicates for a special feature game that the special feature game is ended by a terminating indication (i.e., second indication). Webb teaches a bonus game that contains a terminator symbol within the selections of the bonus game [claims 13, 21]. It would have been obvious to one of ordinary skill in the art to employ a terminating event in any bonus game so that there is no way of allowing the player to play the bonus game indefinitely. This would have a negative effect on the casino and the gaming company who sells the gaming machines. It should be made of note that a terminator indication may be taken as a simple loss in the bonus

Art Unit: 3713

game. So, assuming a basic bonus game with one chance to increase profits, if a player plays and loses, then that could be taken as a terminating indicator to end the bonus game. It is further noted that bonus games are common to light up to show the difference between the basic game and bonus game. With the entrance of the bonus game through a winning combination as taught by Bennett (col. 2: 41-44), it would have been obvious to one of ordinary skill in the art that when a bonus game has ended that the change in appearance, such as lights turning off or dimming down, would be implemented in order to indicate the bonus game has ended and the player is back to the basic game [claim 13, 16, 21]. Moreover, it would be obvious to one of ordinary skill in the art that such an end to a bonus game would be indicated by the terminating indicator taught by Webb so that the game machine has an electrical indication of the game ending.

Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graham et al. (US Patent No. 6,491,584 B2), hereinafter Graham, in view of Gauselmann (US 2004/0092299 A1) in further view of Webb (US Patent No. 6,843,722 B2).

Graham teaches a video slot machine that contains multiple trigger events with bonus features. However, Graham lacks in specifically disclosing that there is an indication of a bonus feature and termination feature as chosen by the player. Gauselmann teaches players choosing special symbols during a base game that may be used as a variety of things, such as a bonus game trigger symbol (§ 0004) [18, 19].

It would have been obvious to one of ordinary skill in the art to allow a player to customize the bonus trigger event to increase user interaction, in turn increasing user excitement to generate more revenue by the gaming machine. Further, Webb teaches a bonus game that contains a terminator symbol within the selections of the bonus game, which would be the second indicator [claim 18]. It would have been obvious to one of ordinary skill in the art to employ a terminating event in any bonus game so that there is no way of allowing the player to play the bonus game indefinitely. This would have a negative effect on the casino and the gaming company who sells the gaming machines. It should be made of note that a terminator indication may be taken as a simple loss in the bonus game. So, assuming a basic bonus game with one chance to increase profits, if a player plays and loses, then that could be taken as a terminating indicator to end the bonus game.

Response to Arguments

Applicant's arguments with respect to the 112 rejection is persuasive and the rejection has been withdrawn.

Applicant's arguments with respect to the art rejections of claims 1-31 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey C. Panos whose telephone number is (571) 272-6136. The examiner can normally be reached on M-F 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Xuan Thai can be reached on (571) 272-7147. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
